

HMI Solutions

Graphite™ and G3 Series of
Advanced Operator Panels

Advanced HMIs with the most features:

- > Converts over 300 protocols
- > Built-in web server
- > On-board data logging
- > Easy-to-install plug-in modules
- > Email and SMS text messaging
- > Indoor and outdoor models
- > Remote monitoring and control

▶▶▶ Graphite Series HMIs. Sleek. Rugged. Flexible.

Connect, monitor and control... anywhere, anytime.

From factories to extreme remote locations, Red Lion's HMI solutions allow customers to easily connect, monitor and control their processes across a broad range of industries that include manufacturing, oil and gas and water/wastewater. Our new Graphite series provides the industry's first rugged HMI solution to combine a wide range of flexible plug-in modules with protocol conversion, data logging and web-based monitoring and control. Available in eight different models with sizes ranging from 7" to 15", Graphite's sleek bezels provide a relatively large display given their overall dimension.

Graphite G07

Graphite G09

Graphite G10

Graphite G12

Graphite G15

Graphite and G3 features include:

- > Protocol converter supports over 300 different industrial protocols
- > Data logging
- > Web and FTP Server for remote access
- > Minimum three serial ports (expandable)
- > USB synchronization of database and log files
- > 10 Base-T/100 Base-TX Ethernet ports
- > Memory card support slot for database/recipe storage and collection of logged data
- > Crimson® software included

New

Graphite features include:

- > Sleek indoor and outdoor displays
- > Rugged cast-aluminum housing
- > Flexible plug-in modules
- > Easy protocol conversion
- > Real-time data logging
- > Remote monitoring and control
- > SD card slot

Learn how you can add total integration, data logging, trending, remote access and more to your machines quickly and easily with a Graphite HMI and Crimson software. Call +1 (717) 767-6511 to speak to a representative.

Red Lion's **Graphite** not only communicates with a minimum of 13 devices simultaneously, but lets you access, monitor and control these devices remotely—from across your network or around the globe.

▶▶▶ **Crimson 3.0®** Absolutely the best interface software

Configure.

Red Lion Crimson software gives users unprecedented operator interface configuration and control.

Red Lion's powerful and universal Crimson 3.0 software is a remarkable programming platform that gives the Graphite a number of exclusive functions. And unlike competitive HMIs that charge you extra for cumbersome proprietary software, with Crimson the set up of even sophisticated applications—configuring communications protocols, defining data tags and creating a user interface—is easier and virtually self-explanatory.

Here are just a few of the exclusive features and capabilities included with Crimson:

- > An extensive library of point-and-click device drivers to quickly establish communications between the Graphite and any device
- > Built-in gateway and protocol converter to Ethernet-enable any connected device
- > Multi-lingual capability with support for thousands of characters used in formats like Cyrillic or Thai that lets OEMs use a single database for global markets
- > Complete library of over 5,000 industrial graphics in over 60 different categories
- > Built-in emulator to test user interface, data logging and even the web server
- > Full-featured C-type syntax programming environment to extend capabilities and use advanced math, local variables, pass parameters, calls, return values and more
- > Flexible, direct access to many internal Graphite Series features such as: read/write to the SD card, manage serial ports, create TCP/IP connections to extract data from web sites or create custom interfaces to unique products

Best of all, Crimson is included. As are software updates, support, cabling instructions and communication drivers. In fact, if a specific device driver does not exist, contact us regarding your requirements. Free online updates allow you to keep your version of Crimson current with the most up-to-date features. New updates include enhanced functionality, product support, drivers and firmware.

Choose from over 300 drivers.

Over 5000 graphics make configuring your application quick and easy.

C-type syntax programming provides maximum control.

Protocol Conversion

- > Converts over 300 major industrial protocols
- > Gateway from any protocol to another
- > Drag-and-drop data mapping via Crimson
- > Easily manage multi-vendor environments

Data Logging

- > Acquire data at user-defined rates from any or all connected devices into a single file
- > Data stored in open CSV file format (Excel compatible)
- > Collect, store, display data
- > Email or FTP logged files

Web Serving

- > Web- and network-enable any and all connected devices
- > Auto-uploads data to FTP, web pages and/or dashboards
- > Display the screen, view tags only or serve custom pages

Remote Access

- > Securely monitor, access or control all system functions
- > Upload/download databases, recipes or log files
- > Email or text message alarm and event notifications
- > Pass-through programming to other devices

Communicate.

Communicating with over 300 different protocols, the Red Lion Graphite HMI Series is the most powerful communications platform available today. Graphite HMIs easily manage multi-vendor devices and provide the ability to web- and network-enable these different hardware types via the most on-board comms and integrated Ethernet. Choose the best-in-class PLC, drives, PCs, PID controllers, etc. from your vendor of choice and control them all from a single point—Graphite will make sure they communicate seamlessly with each other. All connected devices come to life—even serial devices become rejuvenated providing information over Ethernet.

- One RS-422/485 port and two RS-232 ports are standard on all models
- Additional RS-485 port on some models
- All serial ports independently isolated
- Optional Dual Ethernet port provides communications separately to the factory floor and enterprise
- Simultaneous communication with a minimum of 13 different protocols

Collect.

With an installed memory card, USB port and web/FTP upload connectivity, data acquisition and transfer capabilities are endless with the Graphite Series. Data can be acquired from any or all connected devices and compiled into a single CSV-formatted file, where it can be stored, displayed, emailed or uploaded to an FTP or posted to custom web pages. The built-in web server can be used to expose system data via a standard web browser, allowing remote access to diagnostic information or to the values recorded by the data logger.

- Log tags at user-programmable rates with automatic time/date stamp
- Download, upload and remotely access recipes, data and configuration files from the SD card or a USB drive; load database/configuration updates without a PC
- Automatically synchronize logged data between the Graphite and remote FTP site
- Upload data values to your custom web page
- Create batch logs or record data from each batch run separately for each plant shift
- Store security logs to capture user ID when performing tasks and capture alarm event data
- Create customized data screens accessible by password to privately provide selected data for users

Connect.

The ability to monitor only or securely facilitate full control from your remote computer or web-enabled mobile phones and devices is standard.

- Standard web browsers provide remote virtual display and control with screens identical to those on the Graphite
- Browse data or screens, extract or view files from the SD card, or change the program remotely
- Use pass-through programming for connected devices that don't typically allow remote programming

Multi-vendor device environments with different protocols communicate seamlessly with Graphite HMIs.

Have an outdoor application?

No problem, we have a Graphite model for you. Both the 7" and 10" sizes are available with a sunlight readable display and UV protective overlay, providing one of the easiest to read HMIs on the market. Add our wide temperature range and rugged shock and vibration specs and you have the perfect combination for your next outdoor application.

G3 Series HMIs

For less than many stripped-down HMIs, you can add the powerful capabilities and ease-of-use found only in the G3 Series. G3 HMIs come standard with three serial comms, Ethernet, protocol converter, USB and CompactFlash® slot. And at no extra charge, you get full-featured Crimson software with drag-and-drop configuration tools and the industry's most flexible, intuitive and powerful programming environment.

Optional G3 Expansion Cards:

- CANopen or J1939 (model G3CN)
- RS-232/485 (one each additional isolated port; model G3RS)
- DeviceNet™ (model G3DN)
- PROFIBUS DP™ (model G3PB)
- GSM/GPRS Cellular Modem (model G3GSM)

G304K 4.3" Operator Interface Touchscreen

G307K 7" Operator Interface Touchscreen

The G3 Kadet HMI series: impressive features and value for OEMs and machine control.

Touchscreen HMIs that strike the perfect balance of advanced features and value.

The G3 Kadet Series offers a host of functional interface and connectivity features for applications where protocol conversion and simple touchscreen capabilities are needed. Based on the G3 Series with many of the same capabilities, the G3 Kadet offers far more features than conventional HMIs, providing an advanced interface that is ideal for OEMs, both discrete and process machinery.

The right fit for many applications.

Available in 4" (4.3") and 7" models, the G3 Kadet Series offers the same protocol conversion benefits as the original G3. The capabilities of the G3 Kadet Series include multiple serial ports, drag-and-drop configuration via Crimson software, port sharing capabilities and an integrated Ethernet port which allows simultaneous communications with up to seven device types including PLCs, PCs, drives, bar scanners and many more. As with the G3 Series of HMIs, these Kadet models support over 300 different protocols.

Value other HMIs can't touch.

The 4.3" G3 Kadet was designed for applications in which available mounting space is at a premium. The G304K2 features a bright TFT display with 32K color support and a resolution of 480 x 272. Communication is made easy with two serial ports; one capable of RS-232 and the other RS-232/RS-485/RS-422 as well as a 10 Base-T/100-Base TX Ethernet port which supports up to 4 protocols simultaneously.

Need all the capabilities, but a larger display? Our 7" G3 Kadet is the perfect solution. With three serial ports and an Ethernet port, G307K2 can connect to multiple serial and Ethernet devices simultaneously, including PLCs, motor drives, bar code scanners and more. The display is a bright TFT with 32K color support and a resolution of 800 x 480.

The G3 Kadet Series touchscreens offer a host of innovative features and capabilities that you will not find on other HMIs even at twice the price.

▶▶▶ The single platform solution for multi-zone PID loop control and data acquisition just go better.

Full PID Control

Lifting the burden of temperature control from the PLC is a wise choice. But integrating real-time PID controllers used to mean hours and hours of custom PLC protocol development with costly and complex standalone controllers. Now, with the Graphite PID Modules drag-and-drop configuration and built-in drivers, you can configure a high-density multi-zone system and integrate it in only minutes.

Data Acquisition

Advanced data acquisition and management is easy with Graphite's powerful, affordable I/O Modules. Monitor up to 8 points per module for up to 40 I/O with a 7" HMI. Log data and access the files remotely through any Internet browser. Enable remote alerts and receive alarms via email or cellular text messages.

▶▶▶ Graphite Series Plug-In Modules

GMPID / GMPID2

Single and Dual Loop PID Control Modules

- > Performs Heat (reverse), Cool (direct) or Heat/Cool (reverse/direct)
- > Universal inputs accept B, C, E, J, K, N, R, S, and T type thermocouples, 100 ohm 385/392 and 120 ohm 672 type RTDs 0-10V and 0/4-20mA signals
- > Auto addressing minimizes configuration time
- > Fully isolated design provides reliable operation
- > PID control with reduced overshoot
- > On demand auto-tuning of PID settings
- > Discrete outputs available in relay, triac or SSR
- > DC analog output (optional, CSPID1 only)
- > Heater current input (optional) ensures detection of heater circuit failure

GMTCS / GMRTD6

Thermocouple and RTD modules

- > Models available for thermocouple or RTD inputs
- > Unused inputs can be disabled to increase overall reading rate
- > Programmable slope and offset correction to remove sensor error
- > Ideal for data-acquisition applications
- > Auto addressing minimizes configuration time

GMINI8 / GMINV8

Dedicated High-Density Analog Input Modules

- > Accept up to eight $\pm 10V$ or 0/4-20 mA inputs per module
- > Unused inputs can be disabled to increase overall reading rate
- > Ideal for data-acquisition applications
- > Auto addressing minimizes configuration time

GMSG

Strain Gage Modules

- > PID control of load cells, and pressure and torque transducers
- > Single or dual strain gage inputs
- > Three solid-state or relay outputs
- > Digital rate, batch totalizer and Peak/Valley Recording
- > User selectable output (0-10 VDC, 0-20 mA, or 4-20 mA)

GMDIO14

Digital I/O Module with Logic Engine

- > 8 input / 6 output digital module
- > Inputs isolated from outputs
- > Inputs independently switch selectable for sink or source signals
- > Inputs independently configurable for high or low active state
- > Inputs independently switch selectable for high or low frequency signals
- > Relay or NFET output models available

GMOUT

Analog Output Module

- > Four isolated analog outputs
- > Can be individually configured and scaled to generate output ranges of 0 to 5 V, 0 to 10 V, ± 10 V, 0 to 20 mA, or 4-20 mA
- > Auto addressing minimizes configuration time

GMUIN4

Universal Analog Input Module

- > 4 universal inputs
- > Accepts thermocouples, RTDs, 0/4-20 mA and ± 10 VDC
- > Offers complete isolation: inputs, power and core

GMCAN

CAN Protocol Module

- > CAN protocol integration
- > Removes need for external CAN gateways
- > Built-in user-selectable termination resistor

GMJ1939

J1939 Protocol Module

- > J1939 protocol integration
- > Removes need for external J1939 gateways
- > Built-in user-selectable termination resistor
